# Nergy Sense PC Software

- Collect and report Power Usage and Lifetime Sensor data

- Simple operation guides user through common operations

- Predesigned reports highlight key variables

- Software supports no configuration sensor design.

- Supports Windows 7, 8 and 10

- Report output formats include PDF and Word – making integration with custom quotes, etc. easy

- Data export feature supports additional integration

Nergy Sense PC Support software is used with any Nergy Sense sensor for on demand data download and reporting.

Any sensor may be managed through to PC software. Connecting to the Nergy Sense Cloud does not prevent local use via the PC Support software

The software provides a download feature that reads all data from the sensor, Buily in reporting produces insightful reports in PDF, Word or other formats.

Use the PC Support software to provide powerful details for quotes, service analysis or other customer interactions.

Commonly used with the Nergy Sense Power Usage Sensor for test and evaluation applications, the software manages sensor preparation, and data transfer.

Use the software to prep a sensor for testing, install the sensor (in less than 2 minutes), and when the test is complete, download the data and report.

Nergy Sense PC Reporting software is included with all Power Usage Sensors, and available for all Lifetime Sensors.
